

Press release:

Marstal, 10. September, 2015.

E-Ferry project wins prestigious "The Initiative of the Year" Award 2015

On behalf of Marstal Navigationskole and partners – representing the Green Ferry Vision, E-ferry, I would like to thank Fathom for highlighting the importance of ship efficiency, a subject we at Marstal Nautical Academy try to teach our students as one of the most important issues in modern ship operations.

We are proud to have been the lead partner in the Green Ferry Vision, E-ferry project. We are proud to have worked with some of the foremost companies in the business both globally and locally. A work that has resulted in the launch of the 16 million Euros EU supported E-ferry project which will bring into operation an emission free electrical ferry for the island of Aero in the summer of 2017.

The Green Ferry Vision, E-Ferry project clearly demonstrates that even very practice-oriented local initiatives can with the right ambitions and proper professionalism; bring about both visionary and right solutions to today's environmental challenges.

We would thank all our partners but would especially like to thank the municipality of Aeroe for their wholehearted support, and the consulting naval architect company Jens Kristensen from Marstal in Denmark for their ability to think out of the box and finding the right design and solutions.

On behalf of Green Ferry Vision, E-Ferry

Jens Naldal, Director

Marstal Navigationskole (Marstal Nautical Academy)
